

Niobrara SN3 Cable

The Niobrara SN3 is a dumb cable with a male SY/NET[®] (blue hose) co-axial connector at one end and a 25-pin male D-subminiature connector (DB25) at the other. It is intended to be used to connect a SY/NET network device to Dymec[®] fiber optic interface equipment. The SN3 is equipped with a 78 ohm resistor to act as a terminator on a SY/NET network.

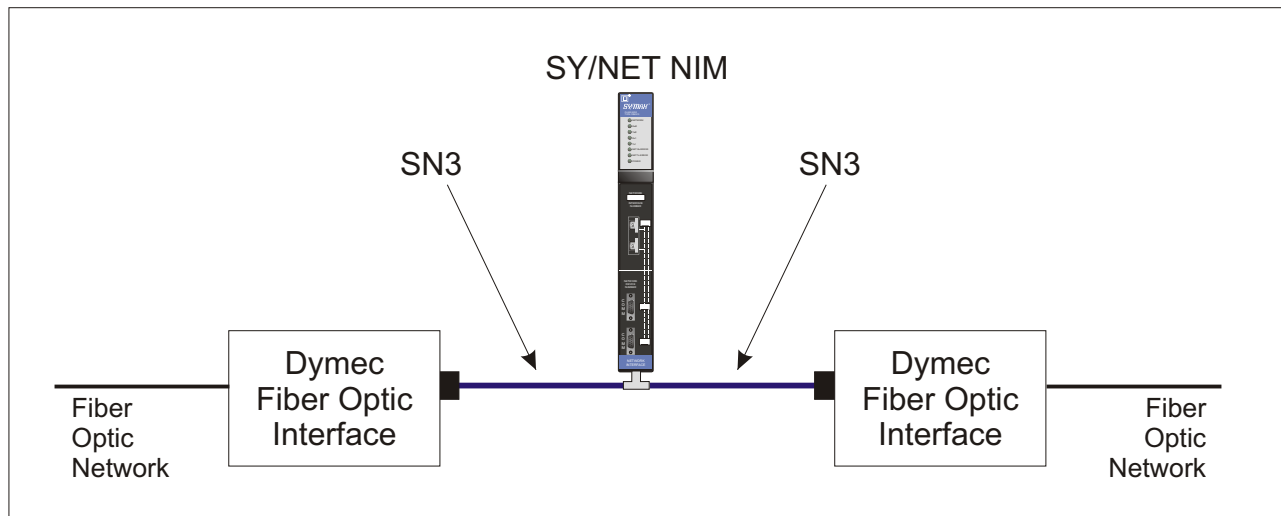

Installation:

1. Connect the co-axial connector to the SY/NET network.
2. Connect the DB25 end of the cable to the Dymec device.
3. Refer to the instructions for the connected devices.

The DB25 end of the cable is compatible with Dymec ports. The pinout of the SN3 is as follows:

A typical application of the SN3 is shown below.

NOTE: For applications not requiring SY/NET termination, use the Niobrara CS108.
